March 28-29, 2020 in Hartford

hack|CT hackathon

Powered by Connecticut's Makerspaces

smart, safe, accessible cities

Connecticut's makerspaces are joining forces to launch HackCT, a 2-day hackathon event designed to solve problems faced by modern cities!

Applications are open to the maker, hacker, and hardware/software development community at large. The theme for HackCT is "smart, safe, and accessible cities". Participants will brainstorm about the problems faced by modern city residents, commuters, and workers and will then break into groups to develop solutions to some of the problems. The theme was specifically chosen to promote the use of Internet of Things (IoT) devices, while still providing enough flexibility to ensure that participants can work on software of web applications if they prefer.

MEALS PROVIDED! PRIZES AWARDED!
